```

The flowchart illustrates the Adaptive Bit Rate Reduction process. It begins with a start point leading to a loop labeled 'L'. The process enters a decision diamond 547, 'END OF FRAME?'. If 'YES', it proceeds to decision diamond 549, 'END OF CLIP?'. If 'YES' to 549, it goes to block 548, 'GET NEXT BLOCK (J ← J + 1)'. If 'NO' to 549, it goes to block 550, 'GET NEXT FRAME', which then leads to block 542, 'PARSE VIDEO FRAME TO 8x8 DCT BLOCKS'. From 542, the flow goes to block 543, 'DETERMINE DCT COEFFICIENT BIT RATE REDUCTION FACTOR (RF)', then to block 544, 'GET FIRST BLOCK (J ← 0)', and then to block 545, 'PARSE THE BLOCK'. Block 545 leads to decision diamond 546, 'NON-ZERO AC DCT COEFFICIENTS?'. If 'YES' to 546, it goes to block 548. If 'NO' to 546, it goes to a block labeled 'J', which then loops back to the entry point before diamond 547. Block 548 leads to the entry point before diamond 547, or to the entry point before diamond 549, or to the entry point before block 550, or directly to the 'END' block.

FIG. 34

FIG. 34

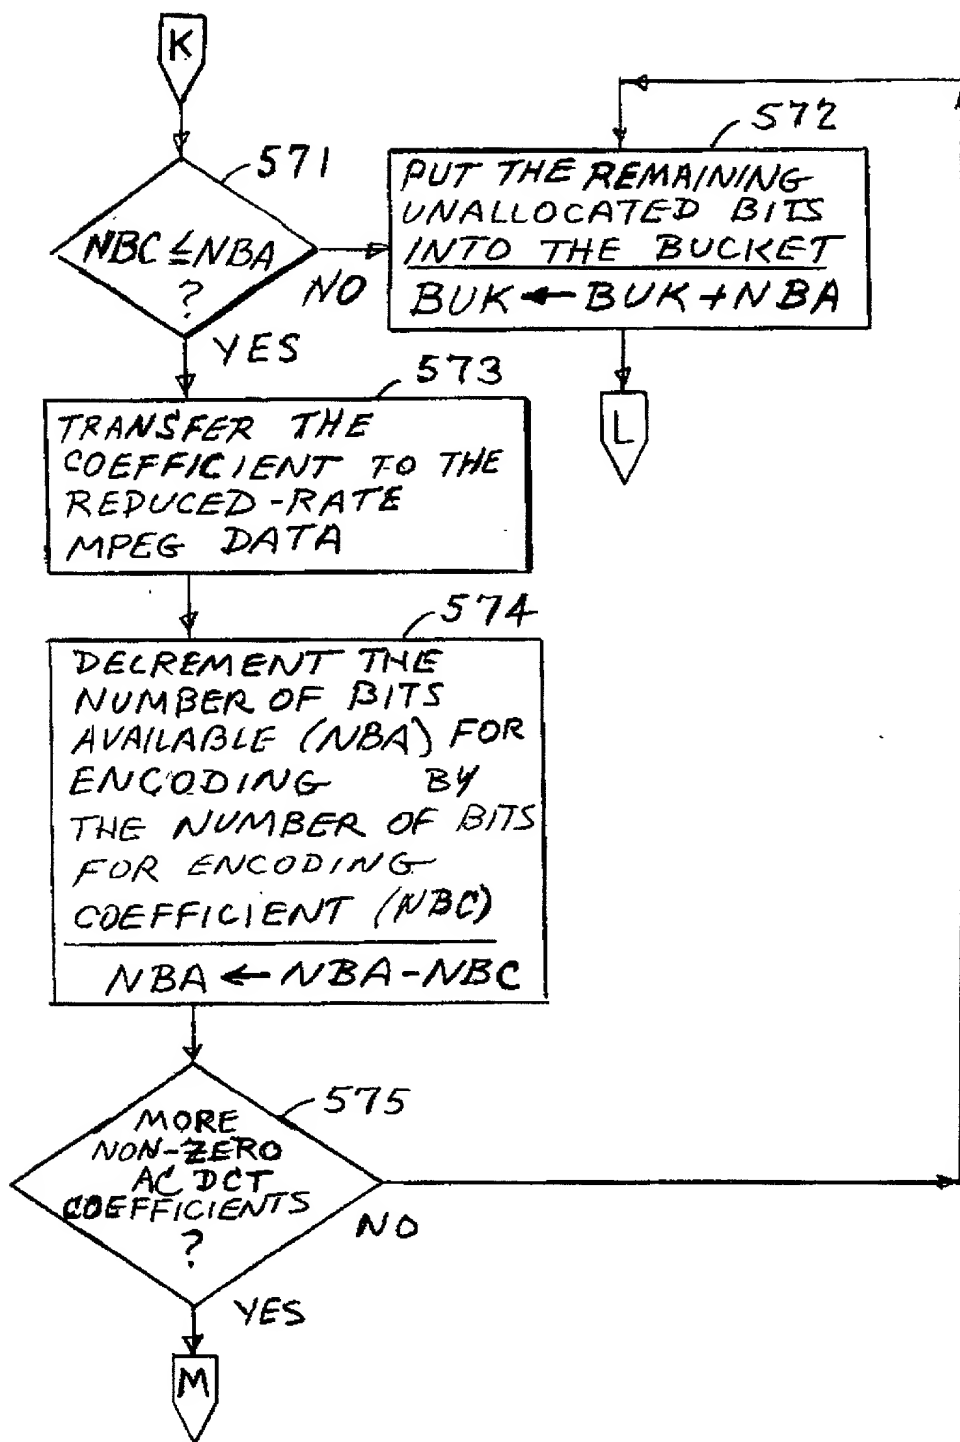

FIG. 35

DETERMINE THE COEFFICIENT BIT RATE REDUCTION FACTOR (RF) FOR A REDUCTION FROM AN MPEG SOURCE HAVING A KNOWN CONSTANT BIT RATE

DETERMINE THE OFFSET RATE (S) OF BITS IN THE ORIGINAL-QUALITY MPEG SOURCE THAT ARE NOT BITS OF THE AC DCT COEFFICIENTS

COMPUTE THE COEFFICIENT
BIT RATE REDUCTION FACTOR
(RF) FROM THE KNOWN
CONSTANT BIT RATE
(BO) AND PADDING (PD) OF THE
ORIGINAL-QUALITY MPEG SOURCE,
THE OFFSET RATE (S),
AND THE DESIRED REDUCED
RATE (BR) OF THE
REDUCED-QUALITY
MPEG DATA

$$RF = \frac{BR-S}{BO-PD-S}$$

RETURN

FIG. 36

DETERMINE THE COEFFICIENT BIT RATE REDUCTION FACTOR (RF) FOR A REDUCTION FROM AN MPEG SOURCE HAVING AN UNKNOWN OR VARIABLE BIT RATE

591
DETERMINE VIDEO FRAME SIZE IN BITS (VS)

592
DETERMINE A MOVING AVERAGE VIDEO FRAME SIZE OVER THE LAST N FRAMES (VAVS)

593
CALCULATE A TARGET AVERAGE VIDEO FRAME SIZE (VRAVS) FROM AN ACCURACY RATE CONTROL FACTOR (AR), THE DESIRED REDUCED RATE (BR) OF THE REDUCED-QUALITY MPEG DATA, AND THE VIDEO FRAME RATE (FR)

$$VRAVS = AR * BR / FR$$

594
DETERMINE NO. OF BITS (BS) IN THE FRAME THAT ARE NOT BITS OF THE AC DCT COEFFICIENTS

595
COMPUTE THE COEFFICIENT BIT RATE REDUCTION FACTOR (RF)

$$RF = VRAVS / VAVS$$
